

# If it's live, it's dangerous!

4 tips to help keep you safe from arc flash.

## 01

### The Issue:

You're compromising safety and reliability for selectivity.

### The Solution:

Use circuit breakers with Built-in selectivity features.

## 02

### The Issue:

You struggle to meet regulatory demands, due to their complexities.

### The Solution:

Use products that help promote safety, and combine tools for maintenance and productivity, all while meeting compliance requirements.

## 03

### The Issue:

Your maintenance frequency is too high, putting your equipment and personnel at risk of an arc flash event

### The Solution:

Help reduce maintenance risks and costs by designing systems with capabilities that help promote safety and reliability, and are code compliant.

## 04

### The Issue:

You want to provide systems that help keep your customers, employees and equipment safe.

### The Solution:

Use products with advanced communication features that provide system insights, and give you the edge in safety planning.
